The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.	Applicant(s)		
10/081,615	SATO, KAZUHIRO		
Examiner	Art Unit		
JUN FEI ZHONG	2426		

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS,

- WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.

 INO period for reply is specified above, the maximum statulory period will apply and will expre SIX (6) MOHHTS from the mailing date of this communic Failure to reply within the set or standard period for reply with (1) satisface, cause the application to become MARADONED (38 U.S.C.§ 133). Any reply received by the Office later than three months after the making date of this communication, even if timely filed, may reduce any earned patient from disjustment. Sea 37 CPR 1.74Q(b). 	tio
Status	
1) Responsive to communication(s) filed on 17 June 2010.	
2a) This action is FINAL . 2b) This action is non-final.	
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits	i
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.	
Disposition of Claims	
4)⊠ Claim(s) <u>25-40</u> is/are pending in the application.	
4a) Of the above claim(s) is/are withdrawn from consideration.	
5) Claim(s) is/are allowed.	
6)⊠ Claim(s) <u>25-40</u> is/are rejected.	
7) Claim(s) is/are objected to.	
8) Claim(s) are subject to restriction and/or election requirement.	
Application Papers	
9)☐ The specification is objected to by the Examiner.	
10)⊠ The drawing(s) filed on <u>21 February 2002</u> is/are: a)⊠ accepted or b)□ objected to by the Examiner.	
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).	
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.12	1(0
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152	

Priority under 35 U.S.C. § 119

12)⊠ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).			
a)⊠ All	b) ☐ Some * c) ☐ None of:		
1.⊠	Certified copies of the priority documents have been received.		
2.	Certified copies of the priority documents have been received in Application No		
3.	Copies of the certified copies of the priority documents have been received in this National Stage		
	application from the International Bureau (PCT Rule 17.2(a)).

Application/Control Number: 10/081,615

Art Unit: 2426

DETAILED ACTION

Status of Claims

Claims 25-40 are pending.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 25-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over
 Henmi (US 5,552,833) in view of Oda et al. (US 5204662), further in view of Haroun et
 al. (Patent # US 5787259), and further in view of Murray (Patent # US 5699089).

As to claim 25, Henmi discloses a reception device for controlling a recording module (e.g., image recording/reproducing apparatus 25; Fig. 9), comprising:

receiving means (e.g., reception means A; Fig. 9 and 16) for receiving a particular format file transmitted through a network (e.g., television-program table information is transmitted using teletext formats in a coding transmission system);

said particular format file including text based control commands (e.g., program start and program terminate information) that control said recording module (e.g., based on program start and program terminate information received, start instruction means 23 and termination instruction means 24 sends command to start/stop recoding

Art Unit: 2426

program) (see col. 3, lines 30-47; col. 4, lines 1-14, 45-60; col. 6, line 4 through col. 7, line 11; col. 7, line 35-col. 8, line 45; col. 11, line 54 – col. 12, line 12);

extracting means (e.g., signal extracting section 1; Fig. 9 and 16) for extracting at least one of said text based control commands from the received particular format file (co. 6, lines 6-12; col. 11, lines 54-62);

control means (e.g., comparator means 22; Fig. 9) for controlling said recording module based on the extracted text based control commands (i.e., based on program start/terminate information received to start/stop recording),

wherein the control means converts the text based control commands to codes based on pre-registered product information of the recording module (i.e., "an image recording/reproducing apparatus control section 38 for generating a control signal to an image recording/reproducing apparatus 39 by control information obtained by the added data decoder section 36"; the product information/or control codes must known to the system in order for the system to control the recoding apparatus) (see col. 6, line 62 – col. 7, line 10; col. 11, line 54-col. 12, line 20; col. 13, line 55-col. 14, line 15),

wherein the particular format file includes a text portion corresponding to the text based control commands (e.g., the program start/terminate information) (col. 3, lines 30-47; col. 4, lines 1-14, 45-60; col. 6, line 4 through col. 7, line 11; col. 7, line 35-col. 8, line 45; col. 11, line 54 – col. 12, line 12).

wherein the text portion has a different format distinguishing the text portion from other portion of the particular format file (e.g., the program start/terminate information has predetermine bits and bit position in a data stream) (col. 3, lines 30-47; col. 4, lines

Art Unit: 2426

1-14, 45-60; col. 6, line 4 through col. 7, line 11; col. 7, line 35-col. 8, line 45; col. 11, line 54 - col. 12, line 12)

wherein said control means uses a timer reservation function to reserve an operation time of said recording module (see col. 6, line 62 – col. 7, line 10).

Henmi does not specifically disclose recording modules with different code systems are controlled after the recording modules are registered.

Oda discloses recording modules with different code systems are controlled after the recording modules are registered (e.g., controller 20 stores VTR control command in memory 30; Fig. 1) (see col. 2, lines 15-32; col. 3, line 40-col. 4, line 32).

It would have been obvious to one of ordinary skill in the art at the time of invention to modify Henmi's system to include control code register as taught by Oda in order to provide an audio/visual system with remarkably enhancing the handling convenience (see col. 2, lines 1-19).

Henmi and Oda do not specifically disclose the codes are downloaded from a server via internet after the recording module is registered.

Haroun discloses the codes are downloaded from a server via internet after the recording module is registered (see col. 7, line 43-col. 8, line 10),

It would have been obvious to one of ordinary skill in the art at the time of invention to include device registration as taught by Haroun in the recoding system of Henmi as modified by Oda for the typical benefit of ease of use, improved functionality, and reduced costs resulting from the elimination of the interface components of the consumer electronics devices (see col. 1. lines 25-29).

Art Unit: 2426

Henmi, Oda and Haroun do not specifically disclose icons indicating commands for determining functions of the recording module.

Murray discloses icons indicating commands for determining functions of the recording module (see col. 5, lines 5-40; col. 8, lines 30-67; Fig. 4),

Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to have command icons as taught by Murray to the recoding system of Henmi as modified by Oda and Haroun to have a graphical user interface that provides for controlling multiple sequential-playback objects which provides for ease of use, reduction of screen clutter, rapidity of command execution and conservation of computer resources (see col. 2, lines 39-45).

As to claims 30 and 35-36, they contain the limitations of claim 25 and are analyzed as previously discussed with respect to claim 25 above.

As for claims 26 and 31, note the discussion above, Henmi fails to disclose that said network through which the data is received is the Internet.

Haroun discloses the codes are downloaded from a server via internet after the recording module is registered (see col. 7, line 43-col. 8, line 10),

It would have been obvious to one of ordinary skill in the art at the time of invention to include device registration as taught by Haroun in the recoding system of Henmi as modified by Oda for the typical benefit of ease of use, improved functionality.

Art Unit: 2426

and reduced costs resulting from the elimination of the interface components of the consumer electronics devices (see col. 1, lines 25-29).

As to claims 27 and 32, Henmi discloses that said operation time of said recording module is stored in a memory (e.g., means 5; Fig. 9 and 16) (see col. 6, line 4 through col. 7, line 11; col. 12, lines 1-8).

As to claims 28 and 33, Henmi discloses that said recording module is a video recording module (see col. 4, line 49 – col. 5, line 14; col. 6, lines 52-67).

As to claims 29 and 34, Henmi discloses that said recording module is a television program recording module (col. 4, line 49 – col. 5, line 14; col. 6, lines 52-67).

As for claims 37 and 39, note the discussion above, Henmi discloses recording module and storage means (see col. 6, line 4 through col. 7, line 11).

Henmi fails to disclose recording module is registered in a storage means accessible by said reception device.

In analogous art, Haroun disclose recording module is registered in a storage means accessible by said reception device (e.g., VCR is connected to computer 15 with IEEE 1394/USB bus which will cause computer 15 assign a ID to VCR; Fig. 1) (see col. 4. lines 5-30).

Art Unit: 2426

Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to include device registration as taught by Haroun in the recoding system of Henmi as modified by Oda for the typical benefit of ease of use, improved functionality, and reduced costs resulting from the elimination of the interface components of the consumer electronics devices (see col. 1, lines 25-29).

As to claims 38 and 40, Henmi fails to disclose the registration information is retrieved each time said text control commands are received by said receiving means.

Haroun discloses the registration information is retrieved each time said text control commands are received by said receiving means (e.g., every command string includes device's name) (see col. 8, lines 39-55).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to include device registration as taught by Haroun in the recoding system of Henmi as modified by Oda for the typical benefit of ease of use, improved functionality, and reduced costs resulting from the elimination of the interface components of the consumer electronics devices (see col. 1, lines 25-29).

Response to Arguments

 Applicant's arguments with respect to claims 25-40 have been considered but are moot in view of the new ground(s) of rejection. Art Unit: 2426

Applicant's arguments, filed 6/17/2010, have been fully considered and are persuasive. Therefore, the previous rejection has been withdrawn. A non-final office action is given.

Conclusion

- Claims 25-40 are rejected.
- The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nishigaki et al. (US Patent # 5900912) is cited to teach by detecting start time data from video signal to start recoding video.

Iwamura (patent # US 5883621)

Humpleman et al. (Patent # US 6288716)

Inquiries

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JUN FEI ZHONG whose telephone number is (571)270-1708. The examiner can normally be reached on M-F, 7:30~5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Hirl can be reached on 571-272-3685. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control N
